

# **NS STARTER**

NO STARTER, STARTER is a unique in-furrow starter fertilizer replacement designed for fields with high soil fertility from years of manure or commercial fertilizer use and application. Our unique in-furrow option is designed to increase soil microbial and fungi activity in order to help growing plants utilize the high fertilizer in the soil to help maximize early emergence, growth and development. NO STARTER, STARTER technology specifically works to increase microbial and fungi activity in cold wet soils to maximize root growth and uptake of fertilizer for strong healthy plants.

## **BENEFITS**

- Increases root structure and length to help plants mine more nutrients from soil.
- Works to release and protect soil Phosphorus from strong cations Ca, Mg, Al, and Fe.
- Extremely important medium for transporting all nutrients from the soil into the plant root by holding ionized nutrients and improving their uptake by roots.
- Increases plant strength and helps improve the absorption and use of these nutrients by the plant.

## **APPLICATION**

Rate: 1 gallon per acre in-furrow by itself or in combination with STARTER Fertilizer.
