

# PROCOTE

**REDSTAR**

REDSTAR PROCOTE is a dealer applied proprietary micronutrient coating that leverages the granular fertilizer to evenly and efficiently distribute essential micronutrients to growing crops. With REDSTAR PROCOTE a farmer's dry fertilizer program becomes the platform to deliver complete nutrition without complexity. REDSTAR PROCOTE is available in Boron, Copper, Manganese, Zinc and blends of BCMZ and BMZ.

- Consistent Return on Investment Across All Crops
- Increased Feeding Sites and Better Nutrient Accessibility
- Improved Operations and Fertilizer Handling

Fertilizer

**REDSTAR**  
**PROCOTE**

Delivered to growers already coated onto the fertilizer so that the micronutrients are evenly distributed.

# REDSTAR PROCOTE

## Consistent Return on Investment Across All Crops

If you want to grow your best crop, it requires micronutrients. Applying REDSTAR PROCOTE has consistently resulted in higher yields and even better return on investment.

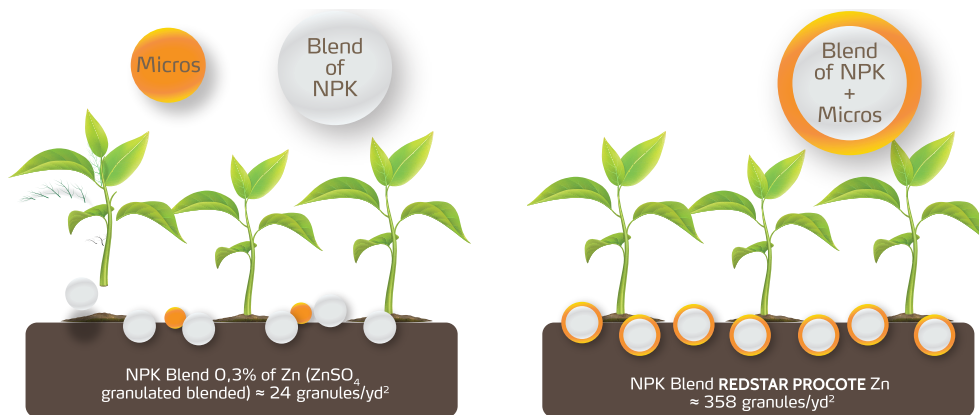

**REDSTAR Procote BCMZ**  
0.5 lbs of B,  
0.8 lbs of Cu,  
0.8 lbs of Mn and  
1.6 lbs of Zn per gallon

## Increased Feeding Sites and Better Nutrient Accessibility

Thanks to REDSTAR PROCOTE's consistent and even distribution through the coating technology, crops have an increase in feeding sites and nutrient accessibility. With the increase in uptake efficiency, the micronutrients are only needed in grams/ac.

## Improved Operations and Fertilizer Handling

REDSTAR PROCOTE decreases granular fertilizer dust by over 99%. Other micronutrient coating technologies rely on micronutrient powders which can result in significant micronutrient loss due to dust off and segregation. REDSTAR PROCOTE offers superior solution using the propriety suspension technology, eliminating loss and dust, while improving handling.
